DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1-19 in Paper No. 6 is acknowledged.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

3. The information disclosure statement filed 06/24/2002 and 07/22/2002 have been considered.

Drawings

4. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the gate electrode having a first conductive layer and a second conductive layer of the p-channel TFT of the pixel portion having **the same width** as recited in claims 1, 16 and 18 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-11, 16-19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The specification does not disclose the gate electrode having a first conductive layer and a second conductive layer of the p-channel TFT of the pixel portion having the same width as recited in claims 1, 16, 18. Note that the drawings and lines 10-13 on page 18 and lines 10-12 on page 30 of the specification only disclose that the first conductive layer and the second conductive layer of all the TFTs are tapered i.e. the first conductive layer and the second conductive layer of the p-channel TFT of the pixel portion do not have the same width.

Allowable Subject Matter

6. Claims 12-15 are allowed.

The prior art of record taken either singly or in combination fails to anticipate or fairly suggest the limitations which the Applicants claim in claim 12 in a manner which would warrant a rejection under 35 U.S.C. § 102 or 35 U.S.C. § 103.

There was no prior art found by the examiner that suggested modification or combination with the cited prior art so as to satisfy the combination of the present independent claim 12; especially, the prior art does not disclose in the p-channel TFT of the pixel portion, the gate electrode has a tapered portion and the impurity region partially overlapping the gate electrode, and in the n-channel TFT of the driving circuit portion, the gate electrode has a tapered portion and the impurity region partially overlapping the gate electrode.
